

LOOKING TO GET CERTIFIED FOR FSC CHAIN OF CUSTODY? DAUNTED BY THE PAPERWORK?

I have helped numerous companies prepare for successful FSC Chain of Custody audits—including wood products manufacturers, wholesale distributors, lumberyards, and printers. My goal is to help you get ready for your CoC audit as efficiently and cost-effectively as possible. My service includes two key components:

STRATEGIC CONSULTATION

Given the nature of your business, your objectives for FSC production or sales, and the requirements of the FSC CoC standard, what makes the most sense for your business? If you manufacture, should you produce a Pure product or a Mixed product? If you produce a Mixed product, should you do so under the Credit System or the Percentage System, and how will you deal with the requirements of FSC Controlled Wood? If you distribute, how can you leverage your existing inventory control and information systems to make the process of tracking FSC-certified products as easy as possible from day 1? If you sell into the LEED market, what are the documentation requirements for the Certified Wood credit and how can you best satisfy them?

ASSISTANCE WITH WRITTEN PROCEDURES

To prepare for a successful FSC CoC audit, you must first develop clear and comprehensive written procedures that detail how your company will conform to the requirements of the FSC CoC standard, and then you must train all appropriate personnel in those procedures. Because I have reviewed and helped prepare dozens of written procedures covering all types of businesses, I can save you many hours of management time in this process.
